## SHARP

### SCIENTIFIC CALCULATOR

MODEL EL-501X

#### **OPERATION MANUAL**

PRINTED IN CHINA / IMPRIMÉ EN CHINE / IMPRESO EN CHINA 11BSC(TINSE1583EHZZ)

#### **INTRODUCTION**

Thank you for purchasing the SHARP Scientific Calculator Model EL-501X

About the calculation examples (including some formulas and tables), refer to the reverse side of this English manual. Refer to the number on the right of each title on the

After reading this manual, store it in a convenient location for future reference.

#### Operational Notes

- Do not carry the calculator around in your back pocket, as it may break when you sit down. The display is made of glass and is particularly fragile.
- Keep the calculator away from extreme heat such as on a car dashboard or near a heater, and avoid exposing it to excessively humid or dusty environments.
- Since this product is not waterproof, do not use it or store it where fluids, for example water, can splash onto it. Raindrops, water spray, juice, coffee, steam, perspiration, etc. will also cause malfunction.
- Clean with a soft, dry cloth. Do not use solvents or wet cloth. Avoid using a rough cloth or anything else that may cause scratches.
- Do not drop it or apply excessive force.
- Never dispose of batteries in a fire.
- Keep batteries out of the reach of children.
- This product, including accessories, may change due to upgrading without prior notice.

SHARP will not be liable nor responsible for any incidental or consequential economic or property damage caused by misuse and/or malfunctions of this product and its peripherals, unless such liability is acknowledged by law.

- Press the RESET switch (on the front), with the tip of a ball-point pen or similar object, only in the following cases. Do not use an object with a breakable or sharp tip. Note that pressing the RESET switch erases all data stored in
- When using for the first time
- After replacing the batteries
- To clear all memory contents
- When an abnormal condition occurs and all keys are inoperative

If service should be required on this calculator, use only a SHARP servicing dealer, SHARP approved service facility, or SHARP repair service where available

#### **Hard Case**

# **Coordinate Conversions**

· Before performing a calculation, select the angular unit.

Rectangular coord.

Polar coord

#### **BINARY, OCTAL, DECIMAL, AND** [10] **HEXADECIMAL OPERATIONS (N-BASE)**

This calculator can perform the four basic arithmetic operations, calculations with parentheses and memory calculations using binary, octal, decimal, and hexadecimal num-

When performing calculations in each system, first set the calculator in the desired mode before entering numbers. It can also perform conversions between numbers expressed in binary, octal, decimal and hexadecimal systems.

Conversion to each system is performed by the following

(2ndF) (►BIN) : Converts to the binary system. "BIN" appears.

2ndF ▶ OCT : Converts to the octal system. "OCT" appears.

2ndF → HEX : Converts to the hexadecimal system. "HEX" appears : Converts to the decimal system, "BIN", "OCT",

2ndF →DEC and "HEX" disappear from the display.

Conversion is performed on the displayed value when these keys are pressed.

Note: In this calculator, the hexadecimal numbers A - F are entered by pressing  $\stackrel{\triangle}{=}$  xp,  $\stackrel{B}{=}$  yx,  $\stackrel{\triangle}{\checkmark}$ ,  $\stackrel{\triangle}{=}$  DEG,  $\stackrel{\blacksquare}{=}$  In, and log, and displayed as follows:

 $A \rightarrow H$ ,  $B \rightarrow b$ ,  $C \rightarrow l$ ,  $D \rightarrow d$ ,  $E \rightarrow l$ ,  $F \rightarrow h$ 

In the binary, octal, and hexadecimal systems, fractional parts cannot be entered. When a decimal number having a fractional part is converted into a binary, octal, or hexadecimal number, the fractional part will be truncated. Likewise, when the result of a binary, octal, or hexadecimal calculation includes a fractional part, the fractional part will be truncated. In the binary, octal, and hexadecimal systems, negative numbers are displayed as a complement.

## **COMPLEX NUMBER CALCULATIONS**

To carry out addition, subtraction, multiplication, and division using complex numbers, press 2ndF CPLX to select the complex number mode.

- A complex number is represented in the a + bi format. The 'a" is the real part while the "bi" is the imaginary part. When inputting the real part, after inputting the number press a. When inputting the imaginary part, after inputting the number press b. To obtain the result press
- Immediately after completing calculation, you can recall the value of the real part with a, and the value of the imaginary part with b
- If the complex numbers are represented as polar coordinates, press  $2ndF \rightarrow xy$  after they are input with a

#### DISPLAY

Floating point system

(During actual use not all symbols are displayed at the same time.) If the value of mantissa does not fit within the range tific notation. The display mode can be changed according to the purpose of the calculation.

: Appears when 2ndF is pressed, indicating that the functions shown in orange are enabled.

: Indicates that hyp has been pressed and the hy-HYP perbolic functions are enabled. If 2ndF archyp are pressed, the symbols "2ndF HYP" appear, indicating that inverse hyperbolic functions are enabled.

**DEG/RAD/GRAD:** Indicates angular units and changes each time  $\bigcirc \mathsf{DRG}$  is pressed. The default setting is DEG.

: Appears when a calculation with parentheses is per-()

formed by pressing ( ). : Indicates that 2ndF) →BIN has been pressed. BIN

Binary system mode is selected. OCT : Indicates that 2ndF ( oct ) has been pressed. Octal system mode is selected

: Indicates that 2ndF has been pressed. **HEX** 

Hexadecimal system mode is selected. : Indicates that (2ndF) (CPLX) has been pressed. CPLX

Complex number mode is selected STAT : Indicates that (2ndF) (STAT) has been pressed. Statistics mode is selected.

: Indicates that a numerical value is stored in the independent memory.

: Appears when an error is detected

#### BEFORE USING THE CALCULATOR

#### **Key Notation Used in this Manual** In this manual, key operations are described as follows:

To specify A (HEX): A 2ndF) π To specify  $\pi$ Exp To specify Exp

STATISTICAL CALCULATIONS

Press 2ndF STAT to select statistics mode.

The following statistics can be obtained:

Data Entry and Correction

Correction prior to pressing DATA

Correction after pressing (DATA):

the denominator is zero.

 $\Sigma x^2$ 

contents.

[Data Entry]

Data DATA

[Data Correction]

Press (ON/C) to turn the calculator on, and (OFF) to turn it off.

## Clearing Numbers

- Press ON/C to clear the entries except for a numerical value in the independent memory and statistical data.
- Press CE to clear the number entered prior to use of function key.

Mean of samples (x data)

Sum of samples (x data)

Entered data are kept in memory until 2ndF STAT or OFF

are pressed. Before entering new data, clear the memory

Data frequency DATA (To enter multiples of the same

Reenter the data to be corrected and press (2ndF) (CD).

In the statistical calculation formulas, an error will occur when:

the absolute value of the intermediate result or calculation

an attempt is made to take the square root of a negative

An error will occur if an operation exceeds the calculation

ranges, or if a mathematically illegal operation is attempted.

Within the ranges specified, this calculator is accurate to ±1 of the least significant digit of the mantissa. However, a calculation error increases in continuous calculations due

to accumulation of each calculation error. (This is the same for  $y^x$ ,  $\sqrt{\phantom{x}}$ , n!,  $e^x$ , ln, etc., where continuous

Additionally, a calculation error will accumulate and

become larger in the vicinity of inflection points and

If the absolute value of an entry or a final or intermediate result of a calculation is less than 10-99, the value is consid-

The number displayed after pressing DATA or 2ndF CD

during data entry or correction is the number of samples

Number of samples

Sample standard deviation (x data)

#### Notes on Battery Replacement Improper handling of batteries can cause electrolyte leakage

**BATTERY REPLACEMENT** 

or explosion. Be sure to observe the following handling rules:

Replace both batteries at the same time. Do not mix new and old batteries.

Make sure the new batteries are the correct type

When installing, orient each battery properly as indicated in

Batteries are factory-installed before shipment, and may be exhausted before they reach the service life stated in the

## When to Replace the Batteries

If the display has poor contrast, the batteries require replacement

## Caution

[12]

[13]

 Fluid from a leaking battery accidentally entering an eye could result in serious injury. Should this occur, wash with clean water and immediately consult a doctor.

Should fluid from a leaking battery come in contact with your skin or clothes, immediately wash with clean water.

If the product is not to be used for some time, to avoid damage to the unit from leaking batteries, remove them and store in a safe place. Do not leave exhausted batteries inside the product

Do not fit partially used batteries, and be sure not to mix batteries of different types.

Keep batteries out of the reach of children.

Exhausted batteries left in the calculator may leak and damage the calculator.

Explosion risk may be caused by incorrect handling.

Do not throw batteries into a fire as they may explode.

## Replacement Procedure

- 1. Turn the power off by pressing OFF. 2. Remove two screws. (Fig. 1)
- Lift the battery cover to rem
- 4. Remove the used batteries then replace with two fresh
- batteries with the positive sides (+) facing up. (Fig. 2) Replace the battery cover and screws.
- 6. Press the RESET switch (on the front).
- Make sure that the display appears as shown below. If the display does not appear as shown, reinstall the batteries and check the display once again.

## **Automatic Power Off Function**

This calculator will turn itself off to save battery power if no key is pressed for approximately 7 minutes.

#### SCIENTIFIC CALCULATIONS

Calculate in the normal mode

Constant Calculations

In each example, press ON/C to clear the display

#### Arithmetic Operations [2]

• The closing parenthesis ) just before = or M+ may be omitted.

When entering only a decimal place, it is not necessary to press o before .

## · In the constant calculations, the addend becomes a con-

stant. Subtraction and division are performed in the same manner. For multiplication, the multiplicand becomes a constant.

[3]

[4]

[5]

[6]

### Refer to the calculation examples of each function.

- For most calculations using functions, enter numerical
- values before pressing the function key.

### Random Numbers

**Functions** 

A pseudo-random number with three significant digits can be generated by pressing <code>2ndF</code> <code>@wwom</code>. Random number generation is not possible when binary/octal/hexadecimal system mode is set.

### Angular Unit Conversions

memory, press +/- and M+.

Each time  $\ensuremath{\text{2ndF}}$   $\ensuremath{\text{DRG}} \blacktriangleright$  are pressed, the angular unit changes in sequence

#### Memory Calculations This calculator has one independent memory (M). It is avail-

tering multiple instructions.

able in the normal mode and binary, octal, hexadecimal system mode. The independent memory is indicated by the three keys:

STO), (RCL), (M+) Before starting a calculation, clear the memory by press-

ing (ON/C) and (STO) A value can be added to or subtracted from an existing memory value. When subtracting a number from the

The contents of the memory are retained even when the calculator is turned off. A value stored in memory will thus remain until it is changed or until the batteries run out.

# Chain Calculations

This calculator allows the previous calculation result to be used in the following calculation. The previous calculation result will not be recalled after en-

Time, Decimal and Sexagesimal Calculations [8]

This calculator performs decimal-to-sexagesimal conversion and sexagesimal-to-decimal conversion. In addition, the four basic arithmetic operations and memory calculations can be carried out using the sexagesimal system. Notation for sexagesimal is as follows:

Note: When the calculation or conversion result is converted, a residual may occur

## **SPECIFICATIONS**
