

HPG-370GA

FEATURES

- Offers 100-Watt Power Handling with High Intelligibility and Sound Penetration
- Rugged, Compact, Weatherproof Construction
- Specifically Designed for Electronic Siren and Voice Communication Signaling on Emergency Vehicles

APPLICATIONS

Utilize heavy-duty siren loudspeaker Model HPG-370GA for high-powered transmission of electronic siren and voice communications in vehicular applications. Because of the unit's ruggedness and compact size, it is suitable for installation within standard-sized lightbars, engine compartments, or for mounting in front of the radiator or on the bumper of any ambulance, fire, law enforcement, utility, or other public service vehicle.

GENERAL DESCRIPTION

Atlas Sound siren loudspeaker Model HPG-370GA is a reflex-type loudspeaker with a rectangular molded bell. It is rated at 100 watts RMS in electronic siren use.

Model HPG-370GA provides optimum sound level output of 120dB (measured at 1600 Hz, rated power, 3 meters on axis) and features a directed dispersion range of 120H° x 140V° (1 kHz octave band) to assure high-intensity acoustic penetration for electronic siren signals.

Unit contains the patented Atlas Sound SD-370A compression driver (U.S. Patent #7,760,501) complete with a non-fatiguing, self-aligning sound chamber assembly. These drivers have earned acceptance as the quality and performance standard for 100-watt electronic signal systems in police, fire, ambulance, and utility vehicles throughout the world.

A patented, heavy-duty, one piece steel mounting bracket (U.S. patent #394,660) permits full-axis orientation of the loudspeaker for preferred sound-projection directivity. The projector assembly is manufactured of plastic and finished in black. The driver is finished in black baked epoxy for optimum durability and corrosion protection. Units are shipped complete with all components and installation data for field installation. Replacement head assembly (Model K-370A) or driver assembly (Model SD-370A) are available for field replacement.

Product series is suitable for use with matched amplifier and control equipment in systems requiring AMECA (Automotive Manufacturer Equipment Compliance Agency, Inc., formerly the AAMVA) certification to General Services Administration specifications (KKK-A-1822C).

ARCHITECT & ENGINEER SPECIFICATIONS

Siren loudspeaker shall be Atlas Sound Model HPG-370GA. Assembly shall be of the reflex type and include an 11-ohm compression driver. Power rating shall be 100 watts RMS with nominal frequency response range of 450-3800 Hz (±10dB). Dispersion angle shall be 80° x 105° in the 1 kHz octave band. Sound level shall be 116dB

when measured at 1600 Hz rated power at 3 meters (ref: .0002 dynes/cm²). Unit shall be furnished with a steel mounting bracket and have a field-replaceable driver-head assembly. Termination shall be complete via 20" (508 mm) 18-gauge, color-coded leads.
